

Nelson Bay Sea Slug Survey, 11-12th September 2021

Due to Covid restrictions the September Sea Slug Census had to be cancelled. However, some lucky locals were still able to get out to do a seasonal survey of the sea slugs that were around.

71 species were found (with 3 bubble shells), including **1** new species!

Hallaxa sp.

Found by Meryl Larkin and Chris Westley

Thanks to the 7 intertidal searchers and divers that sent in photos;
Chris Westley, Dave Harasti, Linda Coleman, Jim Dodd, Meryl Larkin, Paul Dupreez and Ron Bowditch

The following pages shows all the species found on the survey.

Note: All photos were taken by participants in the survey.

Aphelodoris varia

Aplysia concava

Aplysia extraordinaria

September 2021 Nelson Bay Sea Slug Survey

Aplysia sydneyensis

Austraolis ornata

Berthellina citrina

Bornella hermanni

Bulbaeolidia alba

Caloria indica

Ceratosoma amoenum

Ceratosoma brevicaudatum

Chromodoris sp.1

Coryphellina cf lotos

Coryphellina poenicia

Cratena lineata

Dendrodoris nigra

Dermatobranchus dendronephthiphagus

Dermatobranchus primus

September 2021 Nelson Bay Sea Slug Survey

Dermatobranchus sp. 1

Doriopsilla carneola

Doriopsilla peculiaris

Doriprismatica atromarginata

Doris cameroni

Doto sp. MN1

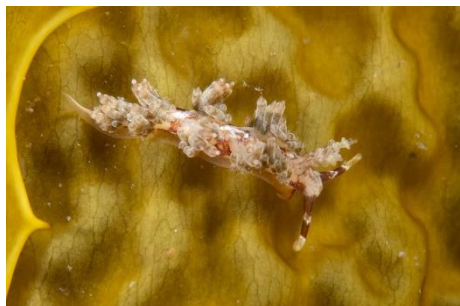

Doto sp. CW1

Elysia tomentosa

Eubranchus sp. trd1

Facelina newcombi

Favorinus tsuruganus

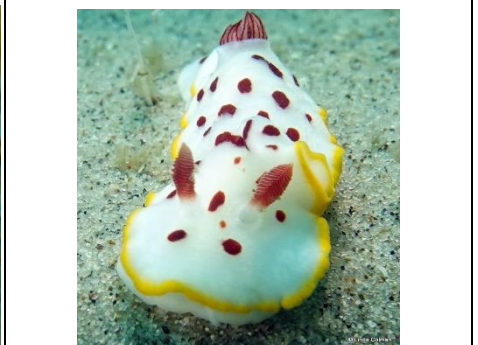

Flabellina sp. 2

Goniobranchus aureopurpureus

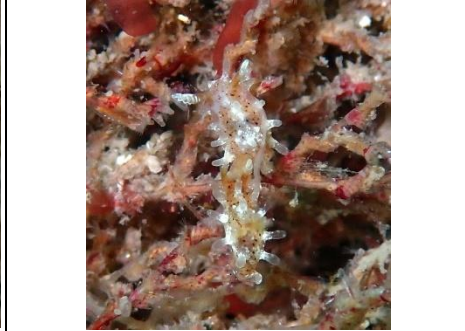

Goniobranchus daphne

Goniobranchus splendidus
